

Strategic, Secure, and Scalable AI Solutions for the Entire IP Lifecycle

AQX AI Solutions Overview

AI Strategy

As artificial intelligence rapidly transforms the intellectual property landscape, Anaqua is leading the way—empowering IP teams to move beyond manual processes and embrace a new era of intelligent, automated, and strategic IP operations.

Anaqua delivers the world's industry-leading IP management suite, powered by pioneering AI technology that redefines how innovations are managed and protected across the IP lifecycle.

Our AI strategy is built on a foundation of real-world impact and client collaboration, guided by five key principles:

1

Designing
for real
problems

2

Making
routine IP
work invisible

3

Accessible
AI for all

4

Assist R&D
teams in the
innovation
process

5

Built for our
clients, by
our clients

Empowering IP Leaders with Strategic Insights

AI Classifier: Transforming Patent Classification

Anaqua's AI Classifier revolutionizes patent portfolio organization by delivering auto-classification seamlessly integrated into your AQX® and AcclaimIP workflows. Our team builds custom models based on your company's taxonomy. The system classifies both internal and external patents while supporting Out-of-Scheme detection for powerful competitive venn diagram-type analytics. Getting started is simple; begin with a zero-shot version or train using classified example patents from AQX. The AI Classifier returns best matches (single or multi-label) with reasoning explaining why choices were made and why close alternatives were excluded. What once required hours of manual review prone to human inconsistency now takes minutes with repeatable accuracy.

- ✓ Identify competitive white space and overlap opportunities
- ✓ Scale to massive portfolios with consistent accuracy
- ✓ Integrates seamlessly with AQX and AcclaimIP

AI Patent Summaries: Surface Insights Quickly

Anaqua's AI Patent Summaries harness the power of generative AI to deliver fast, consistent, and high-quality reviews of any published patent. This enables IP teams to surface insights quickly for evaluation and detailed claims analysis. By providing a standardized framework for analyzing patent claims and inventions, this capability helps practitioners save significant time while gaining deeper, more actionable insights. With easy access to summarized content tailored to specific use cases and decision points, teams can reduce the risk of overlooking critical patent intelligence and make faster, more strategic portfolio decisions.

- ✓ Deliver consistent, high-quality insights across patents using generative AI
- ✓ Helping practitioners evaluate patents faster
- ✓ Reduces the risk of missing critical intelligence

Empowering IP Operations

Document Auto-Processing: Transform Your IP Operations Workload

With Document Auto-Processing, you can automate the extraction of key data from global IP offices including USPTO, TSDR, EPO, EUIPO, CIPO and JPO. AQX quickly identifies documents in a matter of seconds, pulls in bibliographic information, and assigns statutory deadlines to the appropriate IP records. Using Microsoft Azure AI Document Intelligence, it processes over 1,000 documents.

Transform your IP operations workload, reduce risk of errors from manual entry, and allow more time for data validation.

- ✓ Reduce manual workload
- ✓ Improve data accuracy and consistency
- ✓ Minimize repetitive manual tasks

AI-Powered Capability for Law Firms

Time & Billing: Smarter Timekeeping, Seamless Invoicing

Anaqua's WiseTime® is an autonomous timekeeping solution designed to streamline billing processes and eliminate the burden of manual time tracking. Powered by AI and machine learning, WiseTime intelligently tags case references and automatically allocates detailed time data to the correct matter—flowing seamlessly into billing and reporting systems.

Its AI-enabled narrative capability generates clear, granular activity summaries that enhance invoice accuracy and demonstrate value to clients. With just a few clicks, users can create comprehensive invoice summaries, capture more billable hours, and spend significantly less time managing timesheets.

First Half 2026 Focus Areas

Enhanced AI Docketing

Anaqua's next-generation AI-powered IP Operations solution. It is designed to unify and automate the intake, processing, and management of all incoming IP-related emails and documents—whether from Patent and Trademark Offices, foreign associates, or internal workflows—across all Anaqua IPMS platforms. It further automates reference and IDS management, office actions and opposition response drafting.

AI Document Analysis, Translation, and Reporting

This suite of tools simplifies patent management by automating disclosures, drafting, translations, and analysis and delivers faster, smarter results while saving up to 50% of time across key workflows.

AI Brand Protection

An AI-powered monitoring system that scans online marketplaces, social media platforms, and websites for infringing or counterfeit listings, reducing brand dilution and revenue loss from counterfeit goods. It uses image recognition and text matching to identify unauthorized uses of brand assets and prioritizes them by risk.

AI IDS Management

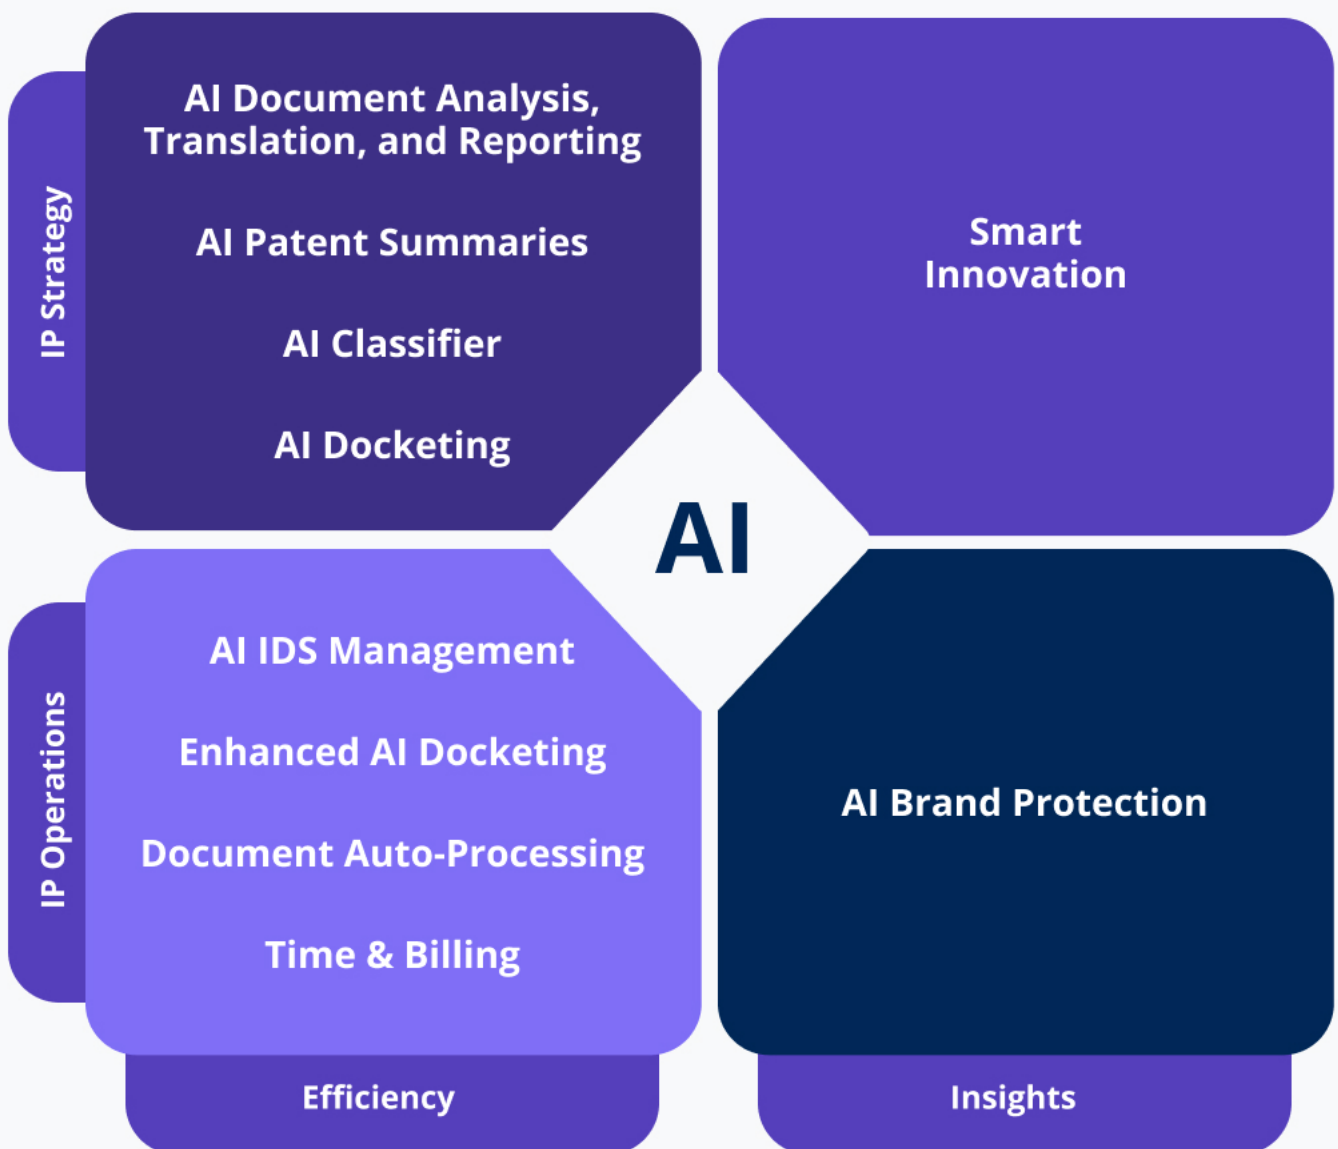

An automated system that collects, analyzes, and prepares information disclosure statements by aggregating cited references from related cases and examiner reports. It ensures compliance with Patent Office (PTO) requirements and reduces manual collation. AI-assisted IDS Management ensures compliance and avoids penalties and reduces admin burden.

Smart Innovation

An AI-powered engine that uncovers untapped innovations from R&D teams, eliminates redundant disclosures, and accelerates IP discovery. It frees teams from the burden of managing time-consuming administrative tasks, enabling them to focus on true innovation and fostering cross-functional, cross-border collaboration.

Anaqua's AI tools will cover the full spectrum of IP and brand management, from automating docketing and patent workflows to safeguarding brands online, ensuring IDS compliance, and accelerating innovation.

Use the quadrant to quickly see which solution best matches your team's needs and where you can save the most time and effort.

What Our Clients Say

"Document Auto-Processing is going to be instrumental for our team in **getting PTO documents downloaded and automatically docketed in AQX**. I am excited about what Anaqua has on the horizon and looking forward to using some of the features in the new release."

Jay Jones
Manager, Docketing,
Dolby

"The Document Auto-Processing capability in AQX is crucial to us, which processes our incoming PTO files. In our previous paper-based file workflow when a file came in from the PTO, it might take three days to process a document and get it to a professional to review. Now, we can get those documents processed and reviewed in **half an hour or less.**"

Chris Farrell
Operations Process Analyst,
Smart & Biggar
